

60 YEARS OF ITALIAN TRADITION

Luxor is an important industrial reality, world wide and European market leader in the production of flexible hoses and components for hydro and thermo-sanitary installations. Luxor has been the expression of the most prestigious made in Italy and the great Italian high technology mechanical workings tradition for fifty years; a quality certified and recognized by the most prestigious International Certification Institutes all over the world.

Our mission is the complete customer satisfaction through a process of continuous technological research in order to make high quality, reliable products, anticipating the market evolutions by innovative partnership with both customers and suppliers. Luxor mission takes

place in its own Research and Development Centre in which new and advanced technologies are constantly analyzed and researched with continuous investments to offer the most innovative and reliable solutions for the international markets at competitive costs, ensuring strict quality controls on each single piece.

Luxor entirely plans and realizes each product, thanks to its decennial know how. The great production strength, a "slender" innovative and advanced industrial organization together with a modern logistic conception, make Luxor able to satisfy every kind of request, even customized, with fast deliveries all over the world.

Luxor is certified

5 / ELECTRICAL AND ELECTRONIC ACCESSORIES

THERMOELECTRIC HEADS

TECHNICAL DATA

Thermoelectric heads function by exploiting the expansion of a thermosensitive element, which is heated up through an electrical resistor when the valve needs to be opened.

This allows for a slow open/close cycle and protects the system against water hammer.

Thermoelectric heads can only be connected to on/off thermostats or chronothermostats. Do not use 3-point or modulating thermostats or chronothermostats. TE thermoelectric heads are of the normally closed type, so they only open when

an opening input (voltage) comes from the control sensor (ex. thermostat).

This allows the head to work only when there is a need for hot or cold water to flow through the heating body, and to remain idle for the rest of the time.

The new thermoelectric heads can be installed in any position, even upside down, since they are secured against leakage from the thermostatic screws.

INSTALLATION INSTRUCTIONS: ASSEMBLY WITH VALVE ADAPTER

INSTALLATION INSTRUCTIONS FOR THERMOELECTRIC HEADS

- Screw the plastic adapter to the thermostatic screw (fig. 1);
- Push upwards the stop ring of the thermoelectric head (fig. 2);
- Place the head perpendicular to the valve (fig. 3);
- With a slight hand pressure, plug the head to the adapter: simply push until you hear a "click" (fig. 4).

FUNCTION INDICATOR

The function indicator (round light blue diskette) allows to easily see (or feel, if in the dark) if the valve is open or closed. The indicator pops up when the valve opens.

START-UP OF THERMOELECTRIC HEADS

All thermoelectric heads are supplied in a locked, partially opened position (ca. 1/4). In order to unlock and start up, the head must be fed power for at least 6 minutes (for example from the thermostat in heating position). During this time, the head opens completely and breaks the block. After that, the head is ready to function.

black and grey	limit switch exit cable

CONNECTIONS

The thermostat and/or chrono-thermostat output to which the thermoelectric heads must be connected are generally as shown in the following wiring diagrams:

Where:

C: Connection to power supply

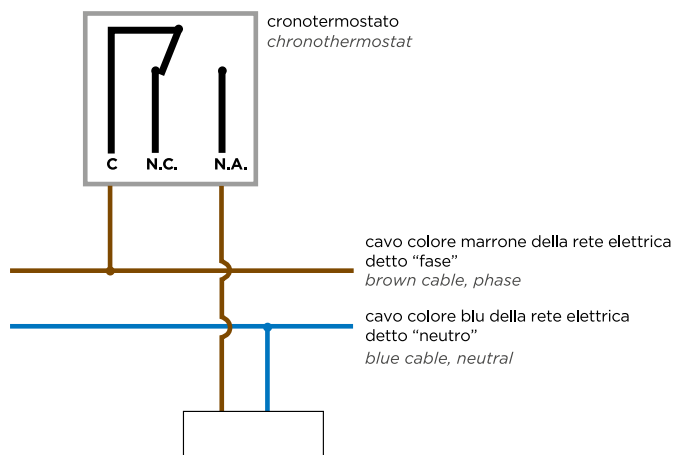

N.C.: output normally closed for cable from the thermoelectric head (do not use since our thermoelectric head is normally closed).

N.A.: output normally open for the connection cable coming from the thermoelectric head (the brown electric cable coming from the thermostatic head must be connected to this type of output).

APPLICATION EXAMPLE WITH CONNECTIONS:

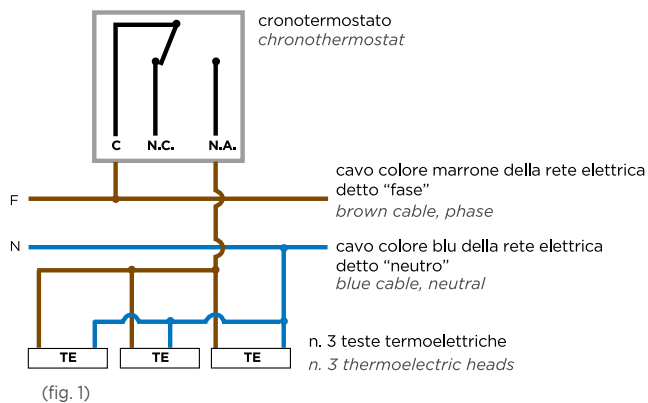

- 1 chronothermostat
- 1 thermoelectric head

Each thermostat or chronothermostat can normally fit up to 10 thermoelectric heads in parallel. To know exactly the number of heads which can be connected, divide the thermostat output contact value N.A. by the head starting power.

APPLICATION EXAMPLE WITH CONNECTIONS:

- 1 chronothermostat
- 3 thermoelectric heads with parallel connection

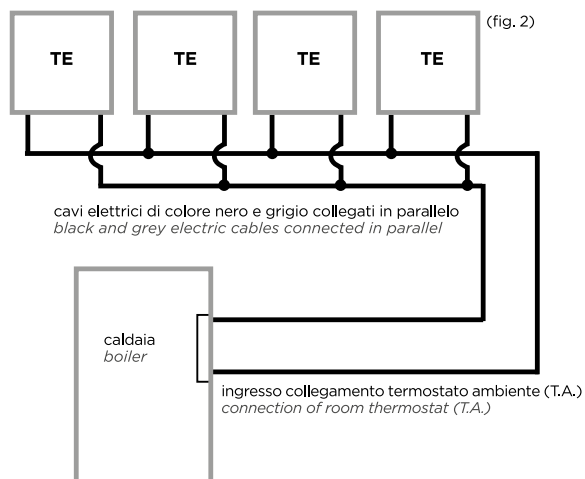

THERMOELECTRIC HEADS WITH AUXILIARY OR LIMIT SWITCH CONTACT

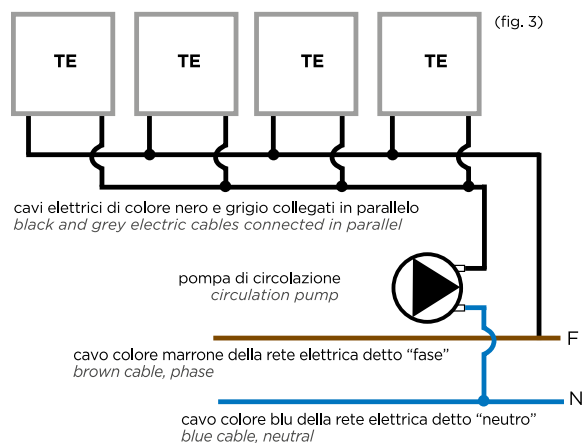

The limit switch contact is used to start the heating system pump when there is at least one thermoelectric head functioning, hence the pump cannot function when all the thermostatic valves are closed.

This device, stopping the pump when the system is not working, reduces wear on the pump and noise caused by the cavitation.

Differential temperature: $6 \pm 1^{\circ}\text{C}$

Nominal voltage on contacts:

- 15 (6)A / 250 V-

Temperature limit of the control head: 85°C

Protection grade: IP 40

Insulation class: I

CONSTRUCTIVE FEATURES

The purpose of safety thermostats is to maintain the water temperature in heating systems within set limits, and especially well under the critical point. Safety thermostats TS 3030, TS 3035, TS 3032, TS 3037 and TS 3050 are either contact or immersion thermostats.

These thermostats may function both as normally open and normally closed. The type of functioning is to be chosen during the electrical connection phase.

Electrical connection:

- Terminal C: phase
- Terminal 1: opens the circuit when the temperature increases
- Terminal 2: closes the circuit when the temperature increases

Generally, in heating systems the electric appliance is connected to terminals C and 1 of the thermostat.

TS 3030

connection cable length	1 m	

OPERATING INSTRUCTIONS

SETTING THE STROKE MANUALLY

1. Remove the connection cable and the protective cap.

2. Insert the 0.3 x 2 mm screwdriver into the manual stroke adjustment device.

3. Turn right or left to extract or retract.

4. Remove the screwdriver after reaching the desired position.

5. Install the protective shield and connect the connection cable.

INSTALLATION WITH ADAPTER

1. Manually screw the valve adapter onto the screw.

2. Manually position the servomotor vertically on the adapter.

3. Manually attach the servomotor to the valve adapter by applying a vertical pressure until you hear the typical "click".

4. Connect the connection cable to the servomotor.

INSTALLATION POSITION

VERTICAL

HORIZONTAL

"UPSIDE DOWN"

The servomotor can be used at any installation location. The preferred installation locations to be used, where possible, are horizontal or vertical.

The "upside down" installation, in particular circumstances (e.g. wastewater), can reduce the service life of the servomotor.

ACTUATOR FOR ROOM TEMPERATURE CONTROL

Those who install heating, ventilation and cooling systems ask for economical but state-of-the-art technologies to guarantee the safety of the systems they develop.

Luxor's actuator TE 3020, with Direct Digital Control for operating voltages from 0 to 10 Volt, offers the following advantageous features:

- **modulating**: continuous and permanent adjustment with 0-10 V actuation;
- **automatic calibration**: self-regulation with zero-point detection and tolerance compensation;
- **easy maintenance**: function indicator;
- **silent**: thermoelectric principle;
- **long-life performance**: wear-resistant, no need for maintenance, operating safety guaranteed;
- **economical**: excellent price-performance ratio.

TECHNICAL DATA

Type: normally closed
 Supply voltage: 24V AC, -10%...+20%, 50-60 Hz
 Max inrush current: <320 mA during 2 min. max.
 Operating power: 1 W
 Working voltage: 0-10 V DC
 Input resistance: 100 k Ω
 Work stroke: 4 mm (minus 0.5 mm over-elevation)
 Pushing force: 100 N +5%
 Liquid temperature: 0÷100 °C
 Storage temperature: -25÷60 °C
 Room temperature: 0÷60 °C
 Degree of protection: IP 54
 Protection class: III
 CE conformity according to EN 60730: EN 60730
 Material: White polyamide
 Power cables: 3x0.22 mm² PVC
 Power cable length: 1 m

CHARACTERISTIC CURVES

OPERATING INSTRUCTIONS

When assembled on control valves, the actuator TE 3020 performs several switch-on and adjustment activities as a modulating (continuous) regulating element. The 0-10 V actuation is proportionally transformed into a 0-4 mm stroke. The electrical heating up of the wax element is controlled by the built-in electronics.

According to the operating voltage applied, the valve silently opens thanks to the lifting of the wax element. The actuator TE 3020 reaches its maximum stroke with operating voltages above 10 V.

INSTALLATION WITH ADAPTER

1. Manually screw the valve adapter onto the valve.

2. Connect the power cable to the actuator.

3. Manually position the actuator vertically on the valve adapter.

4. Attach the actuator to the valve adapter by manually applying the vertical pressure until you hear a click.

The TE 3020 actuators are equipped with the "first open" operation, that is, the actuator at the time of delivery is in the normally open state. This allows the system to be washed and filled with already assembled heads, even before the electrical wiring. In the following commissioning, the application of operating voltage (for more than 6 minutes) causes the automatic triggering of the "first open" operation and the actuator is thus ready for operation.

INSTALLATION POSITION

VERTICAL

HORIZONTAL

"UPSIDE DOWN"

The actuator can be installed in any position, however the recommended positions are vertical and horizontal.

The "upside down" position in some circumstances, e.g. dripping, could reduce the life of the device.

CONDITION OF SALE

ORDERS

Contracts entered by agents or representative are not definitive until they are regularly accepted by supplier. The orders sent either through our Agents or directly, are accepted under the "General Sales Conditions" described in the present Price List terms, and will agree, without reservation, to the terms below.

INCOTERMS

The consignments are always Ex works unless differently agreed in the sales contract.

PAYMENT TERMS

The payment terms are those specified in the offers and the order confirmation and are binding.

In case of delay of payment with respect to the agreed due terms, the commercial interest shall be calculated. The delayed payment of previous supplies will authorize us to cancel all orders in progress. Agents and representative are not entitled to collect credits, unless clearly authorised in writing by the supplier.

CLAIMS

Claims on quantities will be accepted within 8 days from the date of receipt of goods. The supplier will not be responsible for missing or damaged packages, unless in the despatch note it is clearly written "accepted with reservation".

COURT

For any controversies the place of jurisdiction shall be: the Court of Low of Brescia.

PRICES

Prices indicated are those clearly agreed in the contract sales confirmed by our order confirmation.

DELIVERY TERMS

The articles part of this catalogue will be consigned within a term of 90 days from order acceptance. Any date inferior to this term is not to be considered accepted unless confirmed in order confirmation.

The delivery times are not binding for the supplier, who will not respond for any damages arising directly or indirectly from delivery delays, or from a total or partial interruption of the supply.

PACKAGING

The standard packaging is at suppliers charges.

The standard packaging does not include special out of size or particular. Where any special packaging is required this will be at customer's charges, unless previously agreed in writing in the contract sales.

RETURN OF GOODS

No goods will be accepted without our previous authorization.

MINIMUM ORDER VALUE

The supplier in addition to checking the feasibility will have the right to deliver orders with a minimum value of 500 Euro.

WARRANTY

The guarantee terms refer to article 3 and 5 of the 199/44/CE Directive. The guarantee is supported by an adequate insurance policy for the "Product Third Party Liability". The guarantee declines any responsibility whereas the installation and the test have not been correctly carried out. The wholesalers and the retailers are compelled to illustrate to their customers and installers all the useful care for a correct installation of our materials.

CATALOGUE VALIDITY

Illustrations, data and references published in this issue are not binding on the supplier who reserves the right to make reasonable changes, both technical and commercial, at his discretion at any time, still without lowering the design performance of the goods.
